

## Designing Commercial or Multi-Family Refuse Enclosures

These guidelines will help in designing the enclosures that surround commercial containers. If you have any questions about these guidelines, please don't hesitate to call the number listed below. We appreciate the opportunity to offer input, and would be happy to meet with you for a plan review or on-site evaluation of your facility's particular needs.

1. If the driver can dump the container without leaving the truck, front-load discounts will apply.
2. Automated trucks require a minimum of 18 inches space all the way around each container.
3. Due to truck size, enclosures with only one container require a min. opening of 11 ft.
4. Side by side containers for garbage & recycling require a min. opening of 18 ft.
5. All minimum opening dimensions must be free of any posts or barriers.
6. Gated enclosures must be equipped to secure gates fully open during windy conditions.
7. Truck-entry into enclosures must be level. No ramps leading to enclosures.
8. Covered enclosures require a min. opening height of 8 ft. and for automated collection the containers must remain along front face of the enclosure's opening.
9. We recommend maintaining a min. of 36" of free access to the load-in side of each container.
10. We recommend a 4 inch inside ground-barrier to protect against accidental damage.
